Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Data	8 April 2026
Team ID	SWTID-2026-7471
Project Name	Automating employee data
Maximum Mark	4 marks

Solution Requirements

Solution requirements describe **what a system should do** and **how well it should perform**.

Functional Requirements:

Following are the functional requirements of the proposed solution

Key Points

- Focus on **actions and processes**
- Directly linked to **user stories**
- Testable (you can verify if it works or not)

FR No.	Functional Requirement	Sub requirement(story/sub-task)
FR-1	User Registration	Registration through Form Registration through Gmail Registration through LinkedIn
FR-2	User Confirmation	Confirmation via Email Confirmation via OTP
FR-3	User login	Login using email and password Login using google account Forget password and reset options
FR-4	User profile management	View profile information Edit/update profile information Upload profile picture

Non-Functional Requirements:

Following are the non-functional requirements of the proposed solution. These define **how the system performs** rather than what it does.

Types of Non-functional Requirements

Performance

- System should load pages within 2 seconds
- Should handle 10,000 users simultaneously

FR NO.	Non-functional requirement	Description
NFR-1	Usability	The system should be easy to use with a simple and user friendly interface
NFR-2	Security	The system must protect user data using encryption and secure authentication method
NFR-3	Reliability	The system should function correctly without failures and handles errors smoothly
NFR-4	Performance	This system respond quickly and handle multiple user efficiently
NFR-5	Availability	The system should be accessible 24/7 with minimal downtime
